

May 15,2009

FEI and US MOTION are pleased to announce an enhanced partnership for the design, manufacture, and support of FEI's BDS (Beam Delivery System) products.

FEI's Beam Delivery Systems provide leading edge UHV electron beam and ion beam technology to the nanotechnology research community. FEI's 2LE electron column, UHV Magnum focused ion beam column, BDS50, and BDS 200 are installed in major surface science facilities around the world.

US MOTION has a combined 50 man years of experience with FEI products, and is an integral part of the development team for the BDS electronics and software. US Motion has been integrating BDS systems for FEI since 2006. As part of this partnership, FEI has licensed US Motion to manufacture and distribute the BDS line of products. This will significantly strengthen our product offering.

US MOTION can provide a wide range of additional services to our customers, including:

- Hardware integration and testing
- Custom software applications
- On-site integration and support services
- Custom hardware solutions
- Customer training

FEI is pleased to have the addition of US MOTION's experience and resources, and we are actively engaged on new product development.

Requests for information can be addressed to either FEI or US MOTION.
